95-325584/42 A25 F01 SANN 94.02.09
SANYO CHEM IND LTD *JP 07224138-A
94.02.09 94JP-037902 *(95.08.22)* C08G 18/61, 18/65

Mfr. of polyurethane resin used in elastic fibres for socks, etc - comprises reacting high mol. wt. active hydrogen cpd. having two active hydrogen gps., organic di:isocyanate and chain extender, where active hydrogen cpd. silicon:di:amine cpds.

C95-144565

A(5-G1E, 5-J4, 10-D, 12-C3, 12-F1, 12-S5D) F(1-D7, 1-D10, 2-G4A, 4-C1, 4-C2, 4-C3)

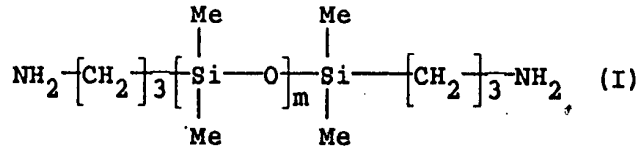
The mfr. of a polyurethane resin comprises reacting:

(i) a high mol. wt. active hydrogen cpd. having two active hydrogen gps.;

(ii) an organic diisocyanate; and

(iii) a chain extender.

The active hydrogen cpd. contains 1-30 wt.% of silicon diamines of formula (I);



(I)

m = 5-100.

USE

Used in elastic fibres for socks, bathing suits or foundation wear.

ADVANTAGE

Product has good tensile properties, friction with metals, running smoothness and heat-setting ability. It can be wound without requiring a large amt. of finishing oils, thus reducing the level of contamination.

EXAMPLE

1600 pts. of polycaprolactone diol (ave. mol. wt. = 2000), 336 pts. of silicon diamine (I, where m = 38) and 180 pts. of 1,4-butane diol were mixed in a kneader. 750 pts. of 4,4'-diphenyl methane diisocyanate (MDI) was added and reacted at 150 °C for 1 hr.. The product was extruded into a pellet. (Intrinsic viscosity = 0.85). It was spun at 500 m/min into a 40 denier monofilament using a spinning oil of 5% silicon-modified polydimethylsiloxane. 4% of this oil was applied to the filament.

JP 07224138-A+

The fibre had: a tension = 3.2 g; a coefficient = 0.390; a tensile strength = 1.5 g/d, an elongation = 380%; and an elastic recovery = 80%.

In a comparative example, 3000 pts. of silicon diamine X-22 161B (RTM) (av. mol wt. = 3000) (I, where m = 38) and 270 pts. of 1,4-butanediol were mixed in a kneader. 1000 pts. of MDI was added and reacted at 150 °C for 1 hr. The prod. was extruded into a pellet (Intrinsic viscosity = 0.90).

The fibre had: a tension = 3.0 g; a coefficient = 0.320; a tensile strength = 1.1 g/d; an elongation = 330%; and an elastic recovery = 68%. (JS)

Thermoplastic polyurethane resin with improved water repellency - obtd. from diol of polysiloxane diol and polyoxy tetramethylene glycol

C88-110496

A(5-G, 5-G3, 6-AA, 9-A)

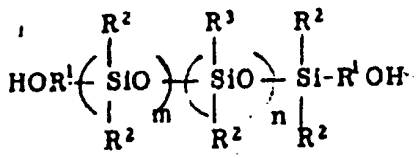
In thermoplastic polyurethane (PU) resin having
[a] soft segments of polyols and
[b] hard segments of aliphatic diisocyanates and aliphatic diamines,
the diols comprise
[1] 3-50 wt. % [based on the PU resin] of polysiloxane diol with molecular wt. of 600-3000, and
[2] more than 0.6 times [based on the diol [1]] of polyoxytetramethylene glycol (POTMG) with mol. wt. of 800-2,200.

ADVANTAGE/USE

Resins with improved moisture transmittance and water repellency are obtd. They are suitable as materials for clothes, industrial use or medical use.

RAW MATERIALS

The polysiloxane diol has formula:



R^1 = 1-6 C alkyl;
R^2 = methyl or phenyl;
R^3 = phenyl or 1-15 C alkyl;
m and n = integer.
Other diols are opt. combined.

EXAMPLE

45 pts. wt. of polysiloxane diol with mol. wt. of 2,000, 45 pts. wt. of POTMG with mol. wt. of 2,000, 60 pts. wt. of poly(1,4-butane-diol adipate) with mol. wt. of 2,000 and 50 pts. wt. of toluene are charged in a reactor, 50 pts. wt. of isophorone diisocyanate and 0.05 pt. wt. of dibutyltin dilaurate are added and agitated at 80°C for 4 hrs. 80 pts. wt. of toluene is added and cooled. A prepolymer soln. with NCO equivalent is obtd.

J63179916-A+

MARKED
27-Oct-97

J63179916-A

270 pts wt. of the soln. is added to a mixt. of 25 pts. wt. of dicyclohexylmethane-4,4-diamine, 190 pts. wt. of toluene, 300 pts. wt. of isopropanol, 140 pts. wt. of methyl cellosove and 0.15 pt. wt. of di-n-butylamine [as a reaction stopping agent], and agitated at 35°C for 2 hrs. A trans-parent PU resin soln. with viscosity of 14,000 cps. is obtd.
(9ppW156ETDwgNo0/0).

INTERNATIONAL SEARCH REPORT
